Thematic hikes

How to enrich your general culture while walking pleasantly?

Come for a walk in the Archeological Park of Les Roches Gravées in Trois-Rivières, for example. It is a magnificent garden where you learn that plants specific to the Caribbean such as calabash, castor oil, roucou, cassava and vetiver were part of the life of the Amerindians, the people who came from South America and who colonized the Lesser Antilles in successive waves for over 2000 years. And here you are, at a detour on a path, you come face to face with petroglyphs or engraved rocks that date back to 300 to 400 years after Christ. They were made by the Arawaks 1700 years ago. A peaceful nation that lived from fishing, hunting, agriculture, who cultivated cassava, made pottery and carved rocks.... Three centuries later, the Caribbean Indians arrived and exterminated them, but thanks to these famous engravings, they left traces of their presence in Guadeloupe. Guadeloupe has the highest concentration of engraved stones of all the West Indies. This is a mystery, why so many rocks engraved in Guadeloupe and not elsewhere?

Les Saintes

one of the most beautiful bays in the world

Disembarking by sea in Terre-de-Haut is already magical: walking in the alleys, tasting the island's specialities, the torment of love, the fish crepe ... Climbing up to Fort Napoleon, being rewarded for your efforts with absolutely splendid views along the way, taking a bath at the beautiful beach of Pompierre: this is worth more than a stopover, a real stay!

The archipelago of the Saintes is located in the south of Guadeloupe islands. Covering an area of 13 km², the archipelago is composed of two main inhabited islands, Terre-de-Haut and Terre-de-Bas. And six islets: the islet in Cabrit, the islets of the Coch, the Grand Ilet, the Redonde, the Augustins and the Rocher du Pâté. Terre-de-Bas is less touristic but just as charming. Small in size but rich in the warm welcome of its people, its ancient pottery and its paths with the scents of Indian wood.
